## A. Introduction

TunTrust is a certification authority (CA) that issues digital certificates in accordance with its CP/CPS published in the website <http://www.tuntrust.tn/repository>. As a CA, TunTrust performs functions associated with Public Key operations, including receiving certificate requests, issuing, revoking and renewing a digital certificate, and maintaining, issuing, and publishing CRLs and OCSP responses.

TunTrust is also a time stamping authority (TSA) and provides proof-of-existence for data at an instant in time as described in the TP/TPS published in the website <http://www.tuntrust.tn/repository>.

## B. TunTrust CAs Hierarchies

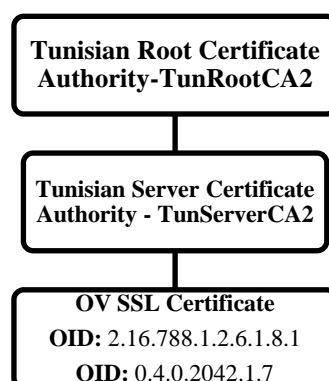

TunTrust, acting as CSP is using several Certification Authorities (CAs), as shown in the certificates hierarchy, to issue TunTrust end-users certificates:

- Two level CA hierarchy (figure 1) to issue OV SSL Certificate
- Three level CA hierarchy (figure 2) to issue OV SSL Certificate, Digital Signature Certificate and e-Seal Certificate.
- One level CA hierarchy (figure 3) to issue visible digital seal certificate.

### 1. Tunisian Root Certificate Authority – TunRootCA2

The first TunTrust CA hierarchy consists of the following CAs (see figure 1):

- One TunRootCA2 self-signed root and kept offline.
- One issuing CA: TunServerCA2 root-signed by **TunRootCA2** and operates online to issue OV SSL certificates.

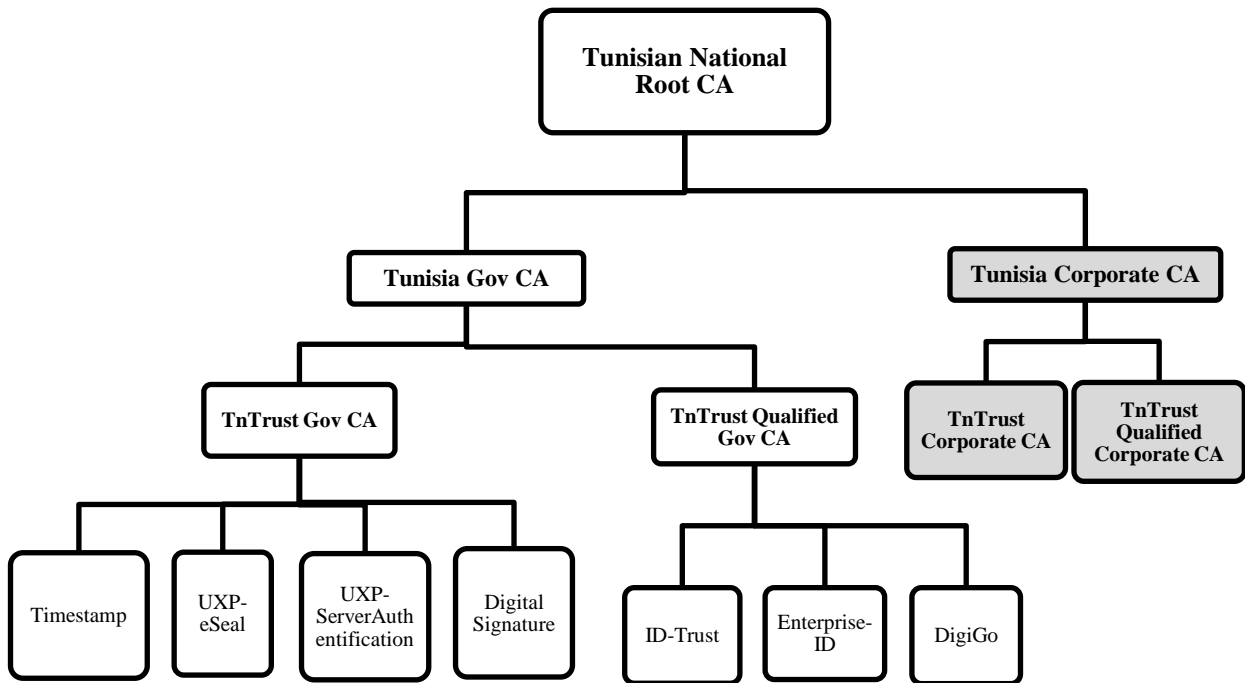

*Figure 1- TunRootCA2 hierarchy*

### 2. Tunisia National Root CA

The Tunisian National PKI hierarchy consists of the following CAs (see figure 1):

- One **Tunisia National Root CA** self-signed root and kept offline.
- Two intermediate CAs:

- **Tunisia Gov CA:** is a root-signed Tunisia National Root CA and kept offline.
- **Tunisia Corporate CA:** is a root-signed Tunisia National Root CA and was revoked on the 08th of August 2018.
- Four Issuing CAs:
  - **TnTrust Gov CA:** is a root-signed by Tunisia Gov CA and operates online to issue OV SSL Certificate and LCP certificate
  - **TnTrust Qualified Gov CA :** is a root-signed by Tunisia Gov CA and operates online to issue QCP-n-qscd and QCP-l-qscd certificates
  - **TnTrust Corporate CA:** is a root-signed by Tunisia Corporate CA and was revoked on August, 08 2018.
  - **TnTrust Qualified Corporate CA:** is a root-signed by Tunisia Corporate CA and was revoked on the 08th of August 2018.

*Figure -2 Tunisia National Root CA hierarchy*

### 3. TN01

TunTrust offers a Visible Digital Seal to ensure the authenticity of certain types of documents as well as the integrity and conformity of the copies made compared to their original version.

In this context, TunTrust issues e-seal certificates that comply with the technical requirements of the 2D-DOC standard v 3.0.0.

The CA is a self-signed root CA that delivers the e-seal certificates directly.

### D. TunServerCA2 End-Entity Certificates Profiles

The following type of Certificates is issued under TunServerCA2 CA:

#### 1. OV SSL Certificates

TunTrust OV SSL Server Certificates are ETSI EN 319 411-1 Certificates not certified as generated on QSCD, with creation of the keys by the Subscriber, with 2048-bit key size and one (1) or two (2) years validity from issuing start date.

These TunTrust SSL Certificates are compliant with and include the OID reference of the OVCP certificate policy of the ETSI Technical Standard 319 411-1 (i.e., 0.4.0.2042.1.7).

The usage purpose of these TunTrust SSL Certificates is the combined purpose of digital signature and key encryption. The TunTrust OVCP Server Certificates include the corresponding TunTrust OID for SSL server certificates, i.e., <2.16.788.1.2.6.1.8 >.

The following table provides the description of the fields for TunTrust OV SSL Certificates issued under TunServerCA2:

## E. TnTrust Gov CA End-Entity Certificates Profiles

The following types of Certificates are issued under TnTrust Gov CA:

### 1. Promosport certificate

Promosport Certificates are ETSI EN 319 411-1 Certificates not certified as generated on QSCD, with creation of the keys by the TunTrust RA, with 2048-bit key size and one (1) or two (2) years validity from issuing start date.

These Certificates are compliant with the OID reference of the LCP certificate policy of the ETSI Technical Standard 319 411-1 (i.e., 0.4.0.2042.1.3).

The following table provides the description of the fields for Promosport Certificates issued under TnTrust Gov CA:

### 3. UXP-ServerAuthentication Certificate

UXP Server Authentication Certificates are ETSI EN 319 411-1 Certificates and certified as generated on QSCD, with creation of the keys by the Subscriber, with 2048-bit key size and one (1) or two (2) years validity period starting from issuing start date.

The usage purpose of these certificates is the combined purpose of digital signature and key encryption. The UXP Server Authentication Certificates include the corresponding TunTrust OID for SSL server certificates, i.e., <2.16.788.1.2.6.9.1.8 >.

The following table provides the description of the fields for UXP Server Authentication Certificates issued under TnTrust Gov CA:

### 4. Digital Signature Certificate

Digital Signature Certificates follow the ETSI EN 319 411-1 standard and are not generated on a QSCD. The creation of the keys is done by TunTrust RA, with a 2048-bit key size and two (2) years validity period.

## F. TnTrust Qualified Gov CA End-Entity Certificates Profiles

The following types of Certificates are issued under TnTrust Qualified Gov CA :

### 1. ID-Trust Certificate

ID-Trust is a Qualified Certificate compliant with ETSI EN 319 411-2 QCP-n-qscd certificate policy with creation of the keys by the TunTrust on a qualified cryptographic support (token or Hardware Security module), 2048 bit key size and two (2) years validity, and with a key usage limited to the support of qualified electronic signature. These Certificates include the corresponding TunTrust OID, i.e., < OID 2.16.788.1.2.6.1.10.1.1 >.

### J. CRL profile

In conformance with the IETF PKIX RFC 2459, the TunTrust CAs support CRLs compliant with:

- Version numbers supported for CRLs
- CRL and CRL entry extensions populated and their criticality.

The profile of the CRL is provided in the table below:

Field	Value
Version	V2 in accordance with RFC 5280.
Signature Algorithm	Object identifier of the algorithm used to sign the certificate sha256RSA.
Issuer DN	Subject CA
ThisUpdate	Issue date/time of the CRL. CRLs are effective upon issuance.
NextUpdate	Date by which the next CRL will be issued. Creation date/time + 365 days for Offline CA Creation date/time + 6 days for Online Issuing CA
revokedCertificates	
userCertificate	Certificate serial number
revocationDate	Revocation time
crlExtensions	
CRL Number	A monotonically increasing sequence number in accordance with RFC 5280
Authority Key Identifier	Populated by CA application contains key id (SHA1) of issuer public key
2.5.29.60	True This field is only activated for TnTrust Qualified Gov CA.

### K. Timestamp Request Format

The following table lists the fields that are expected by the Time Stamping units:

Field	Value / Comment
Document Hash	Hash of the document on which the TimeStamp must be computed
Hash OID	SHA-256
Nonce	A random number, also referred to as “nonce”, allows the developer to better associate a Timestamp Request to its response, since the latter will include the same nonce.
Should TSA Certificate be included?	True/False

### L. Timestamp Response Format

The following table lists which fields are populated by the Time Stamping units:

Field	Value / Comment
Generation Time	The Time at which the time-stamp token has been created by the TSA. It is expressed as UTC time (Coordinated Universal Time).
Document Hash	Hash of the document on which the TimeStamp response has been computed.
Hash algorithm	SHA-256
Policy OID	2.16.788.1.2.6.1.11 The OID of the policy that should be applied by the TSU during the generation of the timestamp token. The policy generally describes legal value and accuracy of the resulting timestamp.
Accuracy	1 second
TSA Certificate Information	Current TSU Certificate
QcStatement	True
